### **Re: Mr Adam George C. Coetzee (29.05.1962)**

**BMI 47**

**ASA III**

**Functional class:2**

Dear Dr Olivier

Thank you for referring the above-mentioned patient to me for a pre-operative assessment prior to an elective right total knee revision, scheduled for 11.08.2025.

Mr Adam Coetzee is a 60-year-old patient whose background medical conditions include:

- 1. Hypertension**
  - a. Diagnosed some years ago
  - b. Well controlled
- 2. Obstructive sleep apnoea**
  - a. On CPAP
- 3. Previous admission for Urinary tract infection**
- 4. Previous prolonged hospitalization, intubation and ventilation after MVA in 2002**
- 5. BPH**
- 6. Class 3 Obesity (BMI 47kg/m<sup>2</sup>)**
- 7. Previous strangulated hernia with bowel obstruction**
- 8. No known allergy**

### **Current Medication:**

- Carlloc 25mg bd po
- Co-Exforge 5/160/12.5mg dly po
- Uromax T dly po
- Diclofenac T dly po –OMIT 2 weeks prior to surgery
- Monjaro injections—OMIT 2 weeks prior to surgery

### **Previous surgeries**

- Bladder repair
- Wrist ORIF
- Colostomy
- Colostomy reversal
- Pelvic repair
- Tracheostomy
- Hernia repair

### **General information:**

- Known drug allergies/sensitivities: None
- Previous perioperative complications: No
- Recent upper respiratory tract Infections: flu +/- 6 weeks ago (was prescribed antibiotic)
- Social habits: social drinker

### **On clinical examination:**

General: Weight 155kg, length 1.84m, not pale, lower limb oedema (left > right), no lymphadenopathy.

Neck: no mass or bruits, previous tracheostomy scar

Skin: no rash, no bruises

Vitals: BP 146/88 (right arm), Heart rate 68bpm (SR), Sats 94% on Room air

CNS: awake, orientated no place, person and time, no neck stiffness, no abnormal signs. No abnormal movements. Brisk Reflexes. Normal strength. Normal vibration bilateral and normal microfilament.

RESP: Bilateral decreased air entry basally, clinically no sign of pleural effusions. No creps or wheezes.

CVS: Pulses palpable, S1, S2 no S3, no murmur

Abd: Soft, not distended, non-tender, no organomegaly detected, previous surgery

Legs: soft, swollen left leg, varicose veins

### **Special investigations:**

- **ECG:** SR, HR 68/Min, IT, PR 240ms (first degree heart block), QRS 86ms, QTc 381ms , no significant ST segment abnormality.
- **CXR (24.07.2025):** Atelectasis involving the basal lung fields bilateral noted. Unfolded aorta
- **Doppler (24.07.25):** no DVT
- **Bloods (Pathcare 21.07.2025):**
  - **FBC:** normal (Hb 14.2g/dL)
  - **UEC:** normal sodium, normal potassium with GFR 94ml/min
  - **Uric acid:** 0.39mmo/L(elevated)
  - **CMP:** normal
  - **LFT:** normal
  - **TFT:** TSH 0.67mIU/l, T4 13.9 pmol/L
  - **HBA1c:** 5.5%
  - **Iron studies:** elevated ferritin
  - **ESR:** 23mm/hr
  - **PSA:** 0.14 ug/L
- **Urine -MCS:** *Klebsiella pneumonia* UTI (100 000 org/ml), ESBL negative

### **New Problems:**

- ***Klebsiella pneumonia* UTI**
  - Patient was started on Ciprobay 500mg bd po
- **First degree AV Block (PR 240ms)**
  - Consider decreasing Carloc dosage

### **Risk Profile**

1. Attached full risk assessment as calculated by the ACS/NSQIP
2. GIT risk factors:

a. Previous GIT bleed	<input type="checkbox"/>
b. Active PUD	<input type="checkbox"/>
c. Use of OAC	<input type="checkbox"/>
d. Use of low dose ASA	<input type="checkbox"/>
e. H.pylori positive status	<input type="checkbox"/>
f. Smoker	<input type="checkbox"/>
g. Nil	<input checked="" type="checkbox"/>
3. Renal risk factors

a. GFR <60ml/min/KO	<input type="checkbox"/>
b. "Triple whammy": use of two/more of the following: NSAIDs/ACE inh/ARB/diuretics	<input checked="" type="checkbox"/>
c. Nil	<input type="checkbox"/>
4. **ARISCAT** Score for postoperative Pulmonary complication: 27 Points (intermediate risk: 13.3%)
5. **CAPRINI** risk score: 10 points (highest risk, 10.7%)

6. **Revised Cardiac Risk Index** score: 1 point (1.6%)

7. Post-operative bleeding risk factors:

- a. Abnormal renal function
- b. Abnormal liver function
- c. Current OAC/NOAC usage
- d. Current NSAID/Aspirin usage
- e. Elderly (>65 years)
- f. Alcohol abuse
- g. Anaemia
- h. Reduced platelet count

<input type="checkbox"/>
<input type="checkbox"/>
<input type="checkbox"/>
<input checked="" type="checkbox"/>
<input type="checkbox"/>
<input type="checkbox"/>
<input type="checkbox"/>
<input type="checkbox"/>

**Peri-operative recommendation:**

Contraindication to elective surgery:  None

Yes:

However, it has been thoroughly explained to the patient that the procedure still carries a risk of perioperative cardiopulmonary complications despite all risk factors being controlled (see ACS document)

My recommendations include:

1. Post-operative care in high care unit based on the presence of:

- Age  $\geq$  75 years
- Revision surgery
- History of VTE
- Spinal surgery
- GFR <60ml/min/KO
- Previous AMI
- ASA  $\geq$  3
- Other:

<input type="checkbox"/>
<input checked="" type="checkbox"/>
<input type="checkbox"/>

2. VTE prophylaxis post-operatively:

- Intermittent pneumatic compression
- Compression stocking
- Enoxaparin 0,5mg/kg to be given within 9-15 hours after the surgery (after discussion with the surgeon)
- Duration of OAC post-op:
  - 14 days
  - 21 days (UKR/TKR)
  - 5 weeks (THR)
  - Lifelong (AF/other)

<input type="checkbox"/>
<input checked="" type="checkbox"/>
<input type="checkbox"/>
<input checked="" type="checkbox"/>
<input type="checkbox"/>
<input checked="" type="checkbox"/>
<input type="checkbox"/>
<input type="checkbox"/>

3. The potential adverse effects & risks of new drug therapies have been explained to the patient.

4. NSAIDS's

- Avoid all NSAIDS
- High GIT/high CVS risk: avoid all NSAIDs

<input type="checkbox"/>
<input type="checkbox"/>

- High GIT/low CVS risk: use COX-2 inhibitor alone/ NSAIDs and PPI in combination
- Low GIT risk/high CVS risk: Use Celecoxib/Naproxen
- Low GIT/low CVS risk: use any NSAIDs

**Other suggestions/pre-op recommendations:**

- No herbal remedies/spices/Omega 3 supplements
- Incentive spirometer post operative
- Increased risk for VTE, coronary artery syndrome and infection were discussed with the patient.
- Omit NSAIDs 2 weeks prior to surgery
- We recommend omitting Monjouro 2 weeks prior to surgery due to the delayed gastric emptying associated with it.
- Patient was started on Ciprofloxacin 500mg bd po
- Consider decreasing Carloc to 12.5mg bd po
- **Please send catheter sample U-MCS on admission.**
- The increased peri-operative mortality and morbidity associated with class 3 Obesity were discussed with the patient.
- Patient to bring CPAP machine when admitted.

Kind regards

Dr PH Sonnekus
